PROFESSIONAL SUMMARY

Software Engineer specializing in backend and platform engineering, with experience building distributed services, event-driven pipelines, cloud infrastructure, APIs, observability, and AI-enabled automation. Experienced with high-throughput systems, asynchronous processing, databases, messaging, and production reliability.

TECHNICAL SKILLS

Languages / Backend: Python, TypeScript, Bun, Hono, FastAPI, REST APIs, WebSockets, HTTP clients

Distributed Systems: Kafka, Redis, BullMQ, asynchronous processing, event-driven pipelines, concurrent workflows

Databases: PostgreSQL, RDS, QuestDB, Memgraph, Cypher, Qdrant

Cloud / Observability: AWS, EC2, S3, RDS, CloudWatch, Grafana, DevOps, monitoring and alerting

AI Systems: AI agents, Agno, multi-agent orchestration, Gemini, semantic retrieval

WORK EXPERIENCE

Assessli

Bengaluru

Software Engineer

Nov 2025 – Present

- Engineered a graph-based behavioral intelligence system in Memgraph covering 224 features across 31 system axes, with causal relationships attached at ingestion.
- Built auditable belief-state infrastructure using Beta-Binomial trust updates, automated validation, and retirement workflows.
- Designed an event-driven multi-agent orchestration architecture on Agno with coordinator routing, dynamic context assembly, and Qdrant-backed retrieval.
- Restructured application memory into PostgreSQL-backed long-term storage, Redis session storage, and hybrid semantic retrieval.
- Built a 180-day behavioral simulation service generating 227-column synthetic persona datasets at 30-minute resolution.
- Engineered a Bun/Hono → Kafka → FastAPI production pipeline and AWS infrastructure spanning EC2 and RDS.

Studio1

Remote

AI Engineer (Contract)

Sep 2025 – Nov 2025

- Engineered a high-throughput AI WhatsApp marketplace for automated scheduling, conversational workflows, and real-time business-data queries.
- Designed scalable infrastructure supporting 500–800 business entities and 3,000–4,000 active clients per business under concurrent traffic.

UpsurgeLabs (Bhindi AI)

Remote

Backend Engineer | DevOps

May 2025 – Jul 2025

- Built and shipped 30+ specialised AI agents spanning enterprise integrations, AWS cloud operations, and media-generation workflows.
- Implemented natural-language AWS automation for EC2, S3, and CloudWatch operations.
- Built secure enterprise API integrations across Jira, Confluence, Bitbucket, and Microsoft Graph.

Browmath Capital

Remote

SWE (DevOps)

Nov 2024 – Feb 2025

- Built exchange integrations and high-performance order adapters using WebSockets and HTTP clients for real-time market systems.
- Developed Python/Kafka/QuestDB processing libraries and implemented PnL-calculation foundations and Grafana monitoring/alerting.

PROJECTS

Agent Orchestrator — github.com/techsouvik/orchestration-system

- Designed asynchronous orchestration and state management for 5+ autonomous agents, reducing workflow latency by 40%.
- Supported 50+ concurrent workflows and increased task throughput 3× compared with synchronous execution.

Code-Planner CLI — github.com/techsouvik/codeplanner-cli

- Built a modular CLI that reduced microservice scaffolding time by 60% and automated 15+ repetitive coding patterns.
- Designed a plugin-oriented architecture supporting templates for 4 major technology stacks.

EDUCATION

Bachelor of Computer Science Engineering

Institute of Engineering and Management, Kolkata

GPA: 8.6

Nov 2020 – Jun 2024
