PROFESSIONAL SUMMARY

Software Engineer focused on backend systems and AI agents, with hands-on experience building production automation, multi-agent orchestration, cloud integrations, and high-throughput services. Strong at turning ambiguous product problems into scalable systems and shipping quickly in startup environments.

TECHNICAL SKILLS

Backend: Python, TypeScript, Bun, Hono, FastAPI, REST APIs, WebSockets, asynchronous processing

AI / Agents: AI agents, multi-agent orchestration, Agno, Gemini, Qdrant, dynamic agent context, behavioral systems

Data / Messaging: PostgreSQL, Redis, Kafka, BullMQ, Memgraph, Cypher, QuestDB

Cloud / Infra: AWS, EC2, RDS, S3, CloudWatch, Grafana, DevOps, monitoring

WORK EXPERIENCE

Assessli

Bengaluru

Software Engineer

Nov 2025 – Present

- Designed a dual-graph behavioral intelligence engine in Memgraph spanning 224 features across 31 system axes, with instance-level causal attribution attached during ingestion.
- Built a Belief Layer using Beta-Binomial trust dynamics, enabling autonomous belief proposals, passive validation every 30 minutes, and auditable retirement.
- Designed a multi-agent orchestration system on Agno with coordinator-to-persona routing and dynamic per-user context assembled from LBM summaries and Qdrant retrieval.
- Restructured agent memory across Postgres, Redis, and Qdrant-backed retrieval layers for long-term, session, and semantic context.
- Built a 180-day behavioral simulation service at 30-minute resolution producing 227-column synthetic persona data from calendar-driven events and correlation graphs.
- Engineered the Bun/Hono → Kafka → FastAPI production pipeline and a Gemini + BullMQ WhatsApp sales automation flow.

Studio1

Remote

AI Engineer (Contract)

Sep 2025 – Nov 2025

- Designed and engineered a high-throughput marketplace powered by AI WhatsApp bots, automating conversational workflows, scheduling updates, and real-time business-data queries.
- Deployed infrastructure supporting 500–800 business entities and 3,000–4,000 active clients per business while maintaining performance under concurrent traffic.

UpsurgeLabs (Bhindi AI)

Remote

Backend Engineer | DevOps

May 2025 – Jul 2025

- Led development of 30+ specialised AI agents, including solutions for Uber integration, AWS cloud management, and media-generation pipelines.
- Built AWS cloud-management agents for EC2 provisioning, S3 management, and CloudWatch monitoring through natural-language commands.
- Integrated Jira, Confluence, Bitbucket, and Microsoft Graph with secure authentication flows and enterprise data connectors.

Browmath Capital

Remote

SWE (DevOps)

Nov 2024 – Feb 2025

- Integrated multiple crypto exchanges for market-data ingestion and built high-performance order adapters using WebSockets and HTTP clients.
- Developed real-time processing libraries with Python, Kafka, and QuestDB and implemented PnL-calculation foundations plus Grafana monitoring dashboards.

PROJECTS

Agent Orchestrator — github.com/techsouvik/orchestration-system

- Built orchestration and state-management logic for 5+ autonomous AI agents; reduced workflow latency by 40% and supported 50+ concurrent workflows.
- Used asynchronous processing to increase task throughput by 3× versus synchronous execution.

Code-Planner CLI — github.com/techsouvik/codeplanner-cli

- Built a modular CLI for project scaffolding that reduced microservice setup time by 60%, from ~20 minutes to ~8 minutes.
- Automated 15+ repetitive coding patterns and supported templates for 4 major technology stacks.

EDUCATION

Bachelor of Computer Science Engineering

Institute of Engineering and Management, Kolkata

GPA: 8.6

Nov 2020 – Jun 2024
